Final Project Rubric

Week 2

New Features

1. Add Playlist functionality as a user-created, sequential list of songs.
2. Add to each music library class (including Playlist) conversion into a JSON-like string representation for saving/loading from a file.
3. Add ability to create each music library class from their respective JSON-like strings.
4. Create list-like data structure to allow simple, intuitive data traversal, insertion, and removal.

Testing

1. Automated test suite covering any changes in non-UI classes is present.
 - a) Tests should aim to cover all equivalence classes of inputs and be appropriately complex.
 - b) Tests shall be built separately from the release version of the code.
